

ECO LINE Vacuum Pumps

The new **SYLCO ECO** line vacuum pumps deliver the stability and durability needed for professional milking with respect to the environment.

Now Environment Friendly!

The **SYLCO ECO** line vacuum pumps are the result of extended research and testing. Our **RnD** applied innovated solutions in order to have maximum efficiency with minimum environment costs.

The new principles we applied in designing and high precision

machining resulted in 30% lower power consumption, with less noise produced.

They are designed to work at very low speeds if needed without rising temperature. This is extremely important when working with a **VCU**.

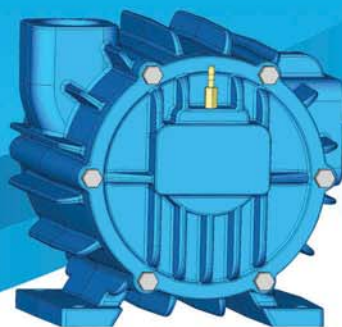

Essential
to all milking
installations

All our pumps are now friendlier to the environment and to your pocket !!!

The ECO line VCU (Vacuum pump Control Unit) takes control of the pumps. It interacts with the ESR (Electronic Servo Regulator) in a unique way to keep vacuum level more stable than ever and power consumption to the minimum.

- Vacuum pump life is extended.
- The VCU can take control of multiple vacuum units.
- It can start and stop them as needed or at a designated pattern.

SVP 1200

The **SVP 1200** is an oil lubricated high efficiency vacuum pump. It is part of the new generation **ECO line pumps**.

It is designed to work on small milking installations either with buckets or with milk transfer line. It can be used with various capacity electric motors.

The group can be purchased with a smaller motor to cover the needs of the farm and upgraded later with a bigger to get the full potential of the pump when really needed. It delivers its full power when used together with **3HP** electric motor.

SVP 2300

The **SVP 2300** is an oil lubricated high efficiency vacuum pump. It is also part of the new generation **ECO line pumps**.

It is designed to work on medium and large milking installations with milk transfer lines. It can be used with various capacity electric motors.

The group can be purchased with a smaller motor to cover the needs of the farm and upgraded later with a bigger to get the full potential of the pump when really needed. It delivers its full power when used together with **7,5HP** electric motor.

KNS 250D

The new **KNS 250D** is the entry level vacuum pump. It is a closed dry vane pump couples with a **1 HP** electric motor.

It is redesigned to be more efficient with less noise. It delivers the necessary vacuum with no needed maintenance. It is ideal for small milking machines especially moving Karts.
